Wheat Exports 1985-1990 (in millions of tonnes)

Visits to two new music sites on the web

常见问题

2

句子中文翻译

Australia starts at 15 million tonnes in 1985.

15 million tonnes of wheat were exported from Australia in 1985.

常见问题

2

句子中文翻译

Conversely, the **initial data** for Australia wheat exports was 15 in 1985.

Conversely, Australian wheat exports started at 15 in 1985.

常见问题

3

还有部分主观判断

Nonetheless, Australian exports met some kind of obstacle and began to fall to its bottom of 11 million tonnes until the year 1989.

~~met some kind of obstacle~~ and

常见问题

4

用词不准确

During the next two years, Canada's export rose **prosperously** and reached its **climax** 25 in 1988.

dramatically

culminated at 25 million tonnes

常见问题

4

用词不准确

Nevertheless, visitor population of Music Choice **mushroomed** to 120 on the 12th day.

went up

常见问题

4

用词不准确:介词问题

On contrast, the amount of exported wheat of Australia ascended from 15 in 1985 to 16 in 1986.

加上单位

In contrast\ by contrast

常见问题

4

用词不准确:介词问题

Canada, as can be observed, plunged to the trough 14 in 1989 before a leap at 19 in 1990.

*Canada, as can be observed, plunged to the trough **at** 14 in 1989 before a leap **to** 19 in 1990.*

常见问题

4

用词不准确

Meanwhile, their **European community counterparts** climbed from 15 to 21 and became the biggest exporting country since 1989.

European community became the biggest wheat exporter , with the figure climbing from 15 million tonnes to 21 million tonnes.

常见问题

4

用词不准确

Except for a slight increase in 1986, wheat exports in Australia descended gradually and in 1990, it was the **minimum** among these three regions.
lowest

常见问题

4

用词不准确

Starting at approximately 19 million tonnes in 1985, it increased to a peak of 24 million in 1998, after which it dropped considerably **next year** to 4 million.

in the year after\ in the following year

in the ensuing year

常见问题

5

结尾太细，数据太多

To wrap up, the wheat export totals in the three countries varied significantly during the time-frame (1985-1990) and the European community replaced Canada to become the leading wheat exporter of the three regions.

常见问题

6

小语法错误频繁

Compared with the **significantly fluctuant** in Canada, the change in Australia was relatively milder.

significant fluctuation

常见问题

6

小语法错误频繁

It declined steadily after a slightly increment in 1985.

slight increment

常见问题

6

小语法错误频繁

After 1988, the amount saw a leap **arrived**
at 21 million **exceeded** the other two
countries in the same year.

*After 1988, the figure leapt to 21 million
tonnes, making Australia the leading
exporter of wheat in 1990.*

常见问题

6

小语法错误频繁

During the following 4 days, there was a descending trend **occurred** to Pop Paradise's visit.

~~there was~~

常见问题

6

小语法错误频繁

In the meantime, the other line surged to 120 thousand, which surpassed the former line, followed by a dip to 110 thousand, collapsed to 70 thousand visits eventually.

流水句

常见问题

从1998到2000年，去电影院的人数从25000增加到了34000。

From 1998 to 2000, the number of people who went to cinemas increased from 25000 to 34000.

*From 1998 to 2000, **cinema audience population** increased from 25000 to 34000.*

常见问题

□ *dining out*

■ *eating at home*

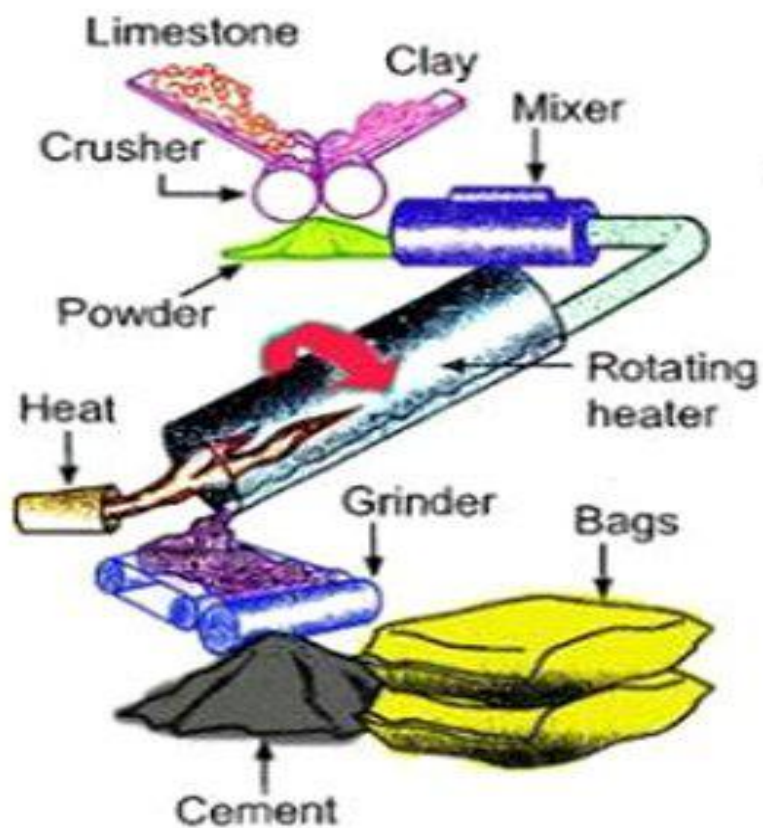

Dining out increased by $2/3$, reaching a pinnacle on Wednesday.

The number of people who choose to dine out increased by $2/3$, reaching a pinnacle on Wednesday.

The diagram below shows how banana chips are made.

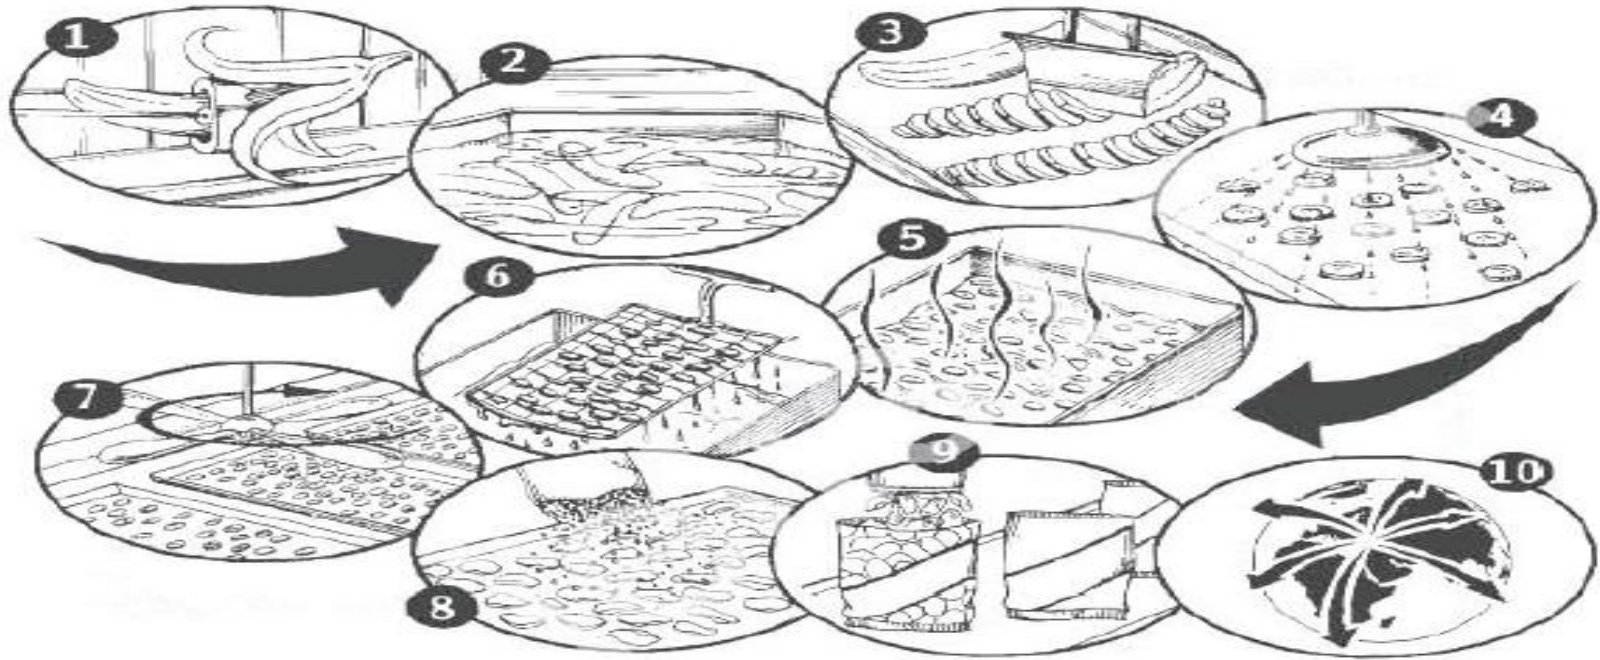

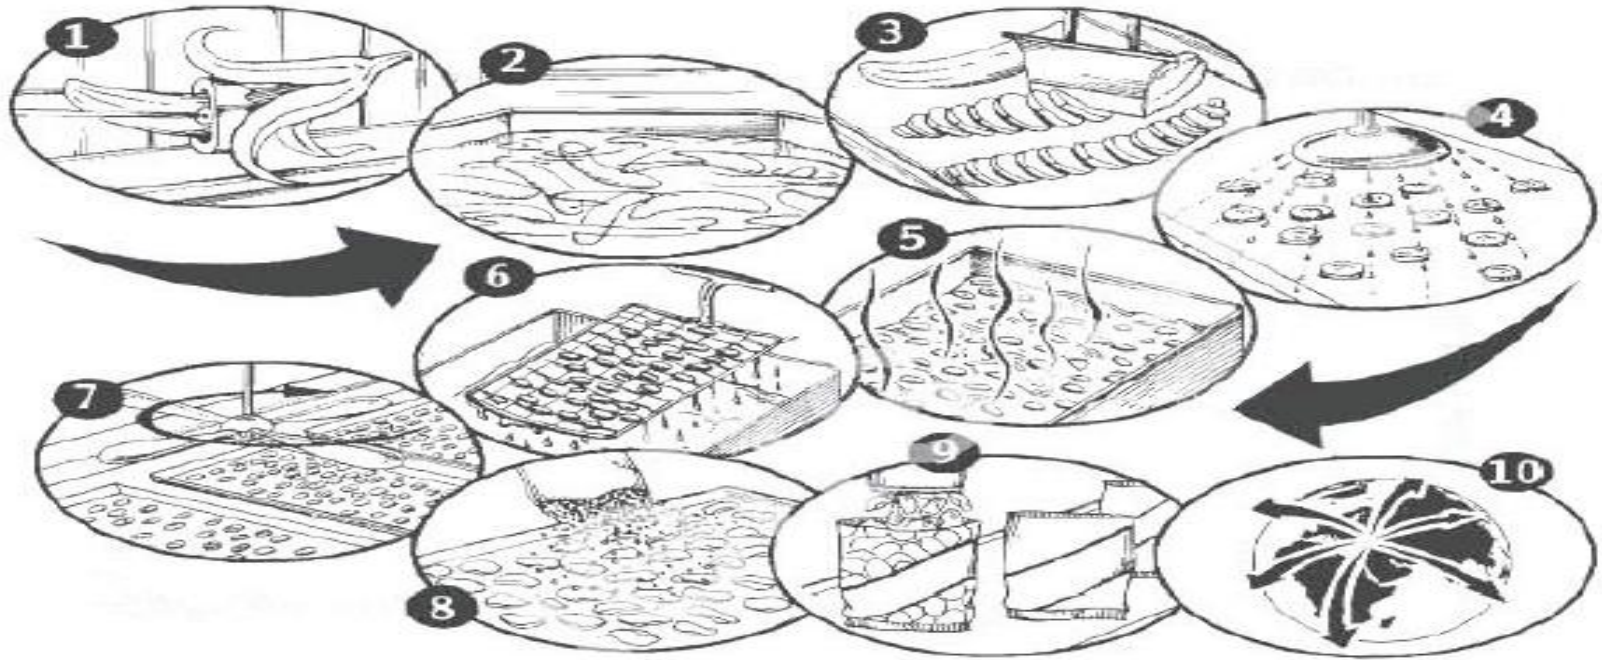

The diagram shows how banana chips 1 are produced, which involves ten stages.

First, the bananas 2 are peeled by a special machine and **then** they 3 are soaked in water. **Next** the clean bananas 4 are fed into a chipping machine where they 5 are sliced into thin chips. **After this** they 6 are dried.

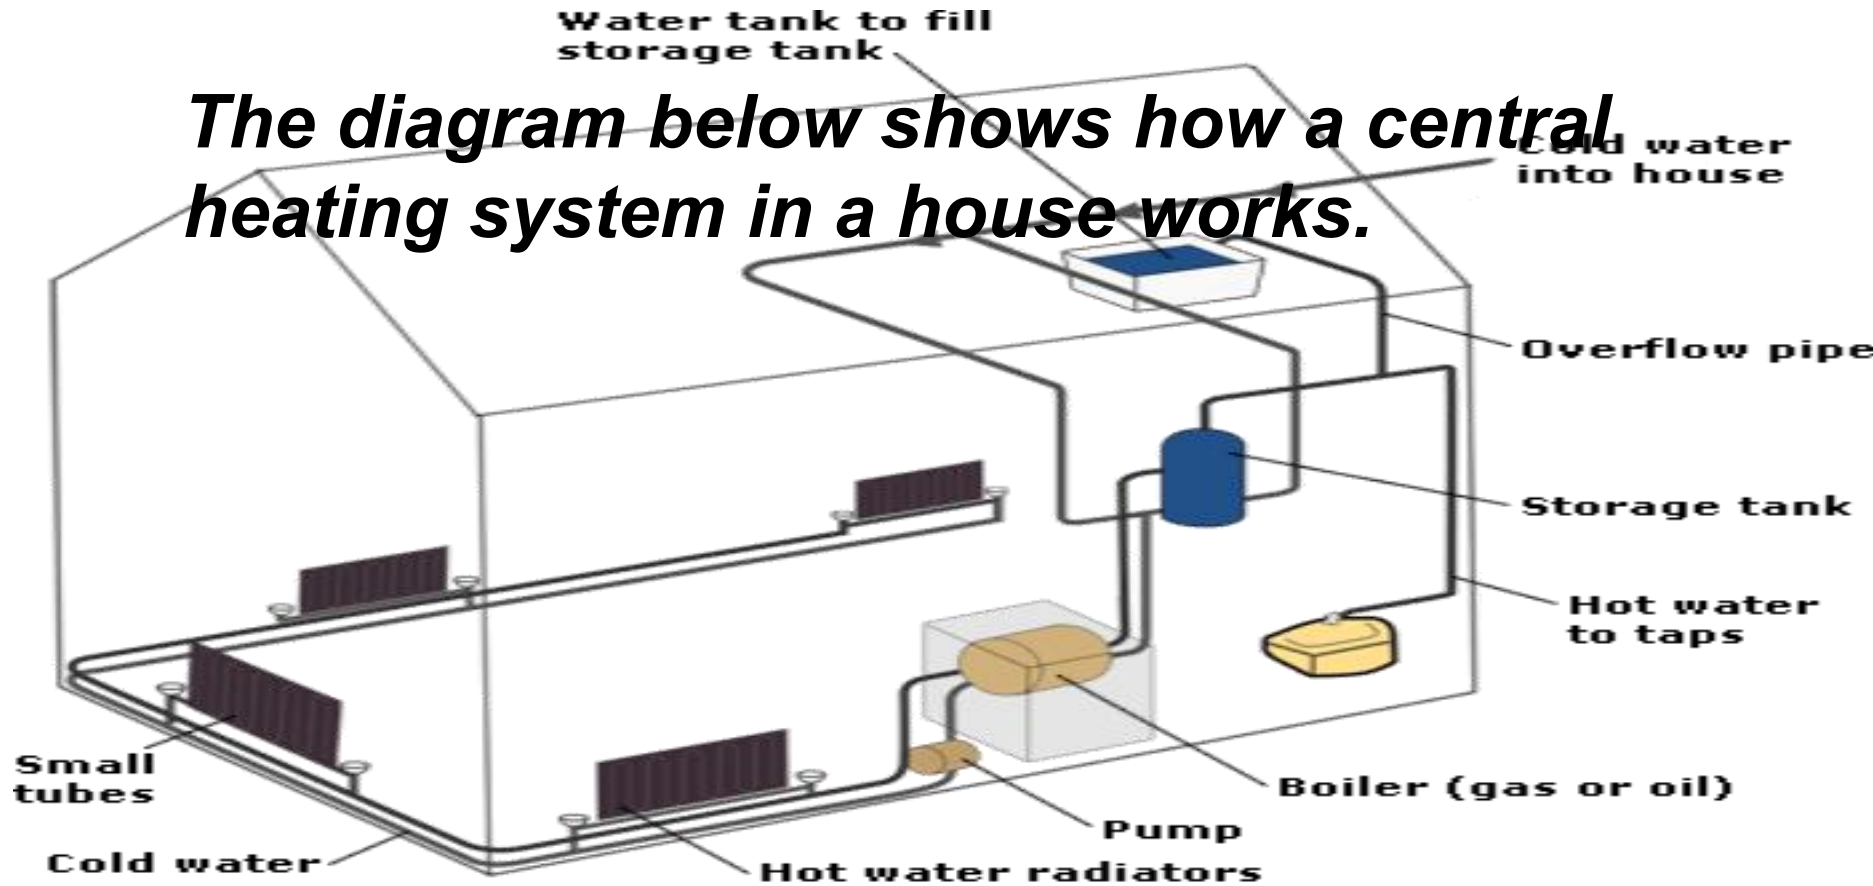

Once they are dry, the banana chips 7 **are poured** in hot oil in large deep fat fryers. The **cooked** banana chips 8 **are scooped** from the fryers using a special sieve which allows all of the oil to drain off. The banana chips 9 **are then fanned** (then) to cool.

When they have reached the right temperature, spices
10 are added for extra taste. Finally the banana
chips are packaged ready to 11 be distributed around the world and
12 consumed.

The diagram below shows how a central heating system in a house works.

This diagram provides an overview of a domestic central heating system. It shows how the tank, boiler and pipes ensure a constant flow of hot water to both the radiators and the taps.

The cold water enters the house and is stored in a water storage tank in the roof. From there water flows down to the boiler, located on the ground floor of the house.

The boiler, which is fuelled by gas or oil, heats up the water as it passes through it. The hot water is then pumped round the house through a system of pipes and flows into the radiators, located in different rooms. The water circulates through the radiators, which have small tubes inside them to help distribute the heat, and this warms each of the rooms. Some of the water is directed to the taps to provide hot water for the house.

Once the water has been through the pipes and radiators, it is returned to the boiler to be re-heated and circulated round the house again.

Introduction: First sentence. Overview: Second sentence.

Key features: Entry of cold water into boiler; circulation of hot water to radiators and taps; return of water to boiler.

Supporting information: direction of flow; types of boiler; location of radiators; radiator tubes

Paragraph breaks: The paragraph breaks mark stages in the process.

Linkers: and, from there, then, once, again

Reference words: it, both, there, which, this

Topic vocabulary: enters, stored, roof, flows, ground floor, located, passes, pumped, system, circulates, heat, directed, returned, re-heated

Less common vocabulary: ensure, fuelled by, heats up, distribute the heat, warms

Structures: An appropriate mix of active and passive structures and a range of sentence types are used.

The diagram explains the way in which bricks are made for the building industry. Overall, there are seven stages in the process, beginning with the digging up of clay and culminating in delivery.

To begin, the clay used to make the bricks is dug up from the ground by a large digger. This clay is **then** placed onto a metal grid, which is used to break up the clay into smaller pieces. A roller assists in this process.

Following this, sand and water are added to the clay, and this mixture is turned into bricks by either placing it into a mould or using a wire cutter.

Next, these bricks are placed in an oven to dry for 24 – 48 hours.

In the subsequent stage, the bricks go through a heating and cooling process. They are heated in a kiln at a moderate and **then** a high temperature (ranging from 200c to 1300c), **followed by** a cooling process in a chamber for 2 – 3 days. **Finally**, the bricks are packed and delivered to their destinations.

The diagram presents the manufacture of five different types of tea. It is immediately apparent that although all the teas are produced from the same leaf, the differences in the manufacturing process result in five different types of tea.

The first three stages of manufacture are the same for all of the five teas. The leaves are grown, they are then plucked, and following this withering of the leaves occurs. The final stage is also the same, which sees all the leaves dried in an oven.

However, in the stages in between this, differing methods of production are employed.

To begin, white tea is unique as it involves no other processing. In contrast, green, oolong and large leaf black tea are all rolled as part of the process.

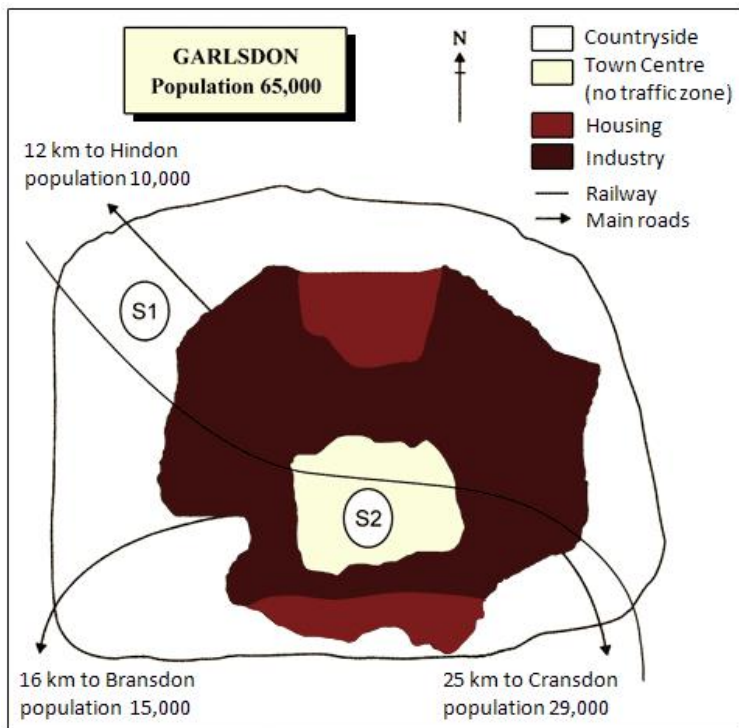

Finally, small leaf black tea is neither steamed nor rolled, but is crushed before being fully fermented.

However, while green tea is steamed before being rolled but is not fermented, the other two teas are first rolled and then both

para 4	Main Body 2	group information together either by location or by time

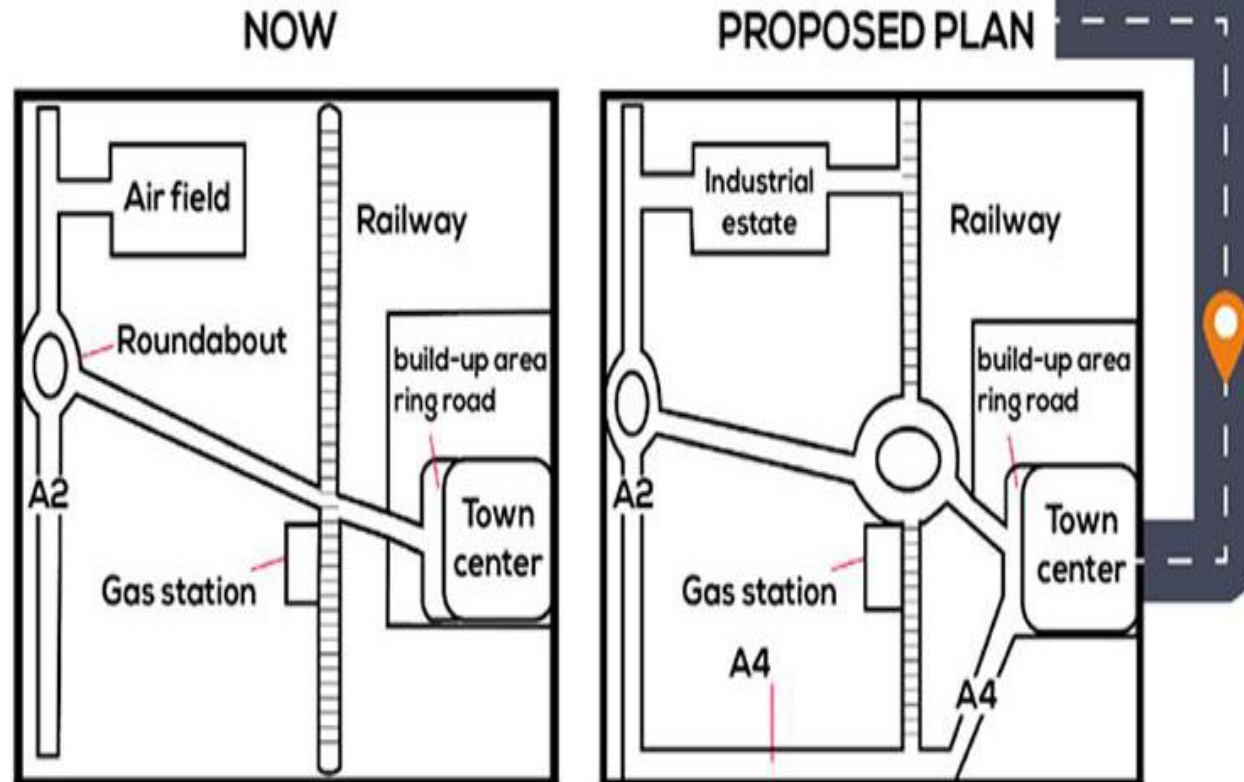

Sample Overviews

1. Over the time period, the area underwent **radical changes**.
2. In the period between 1996 and 2006, the park was **totally redesigned**.
3. From 2008 to 2018, the city center was subject to some **important developments**.
4. The downtown area was **completely renovated and modernized** during the time period.
5. The city **changed considerably** over the period.
6. During the 20-year period, the woodland area **was completely transformed**.
7. Over the time period, the church **was completely refurbished**.
8. Between 2007 and 2017, the old block of flats **was renovated**.

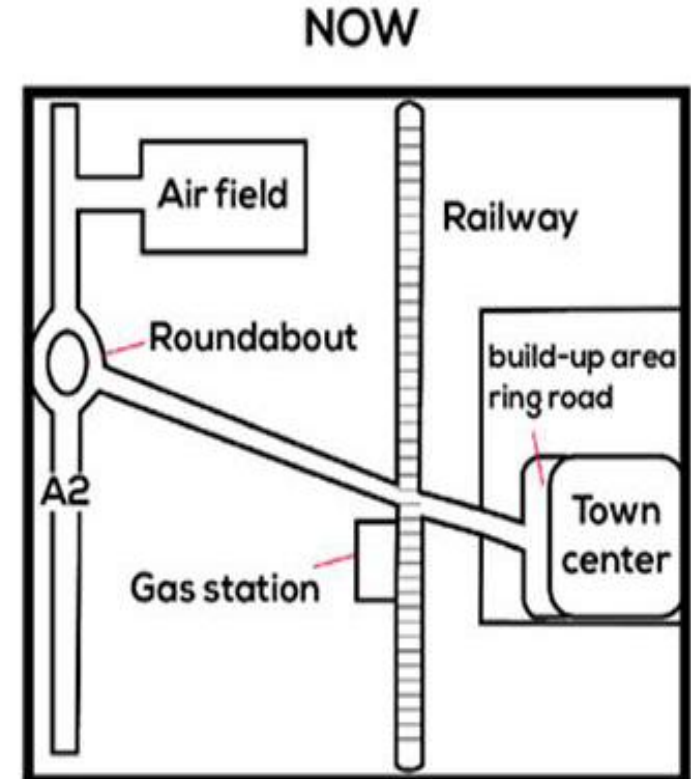

The maps illustrate a number of **proposed** changes that are to **take place** in the town of Hunderstone.

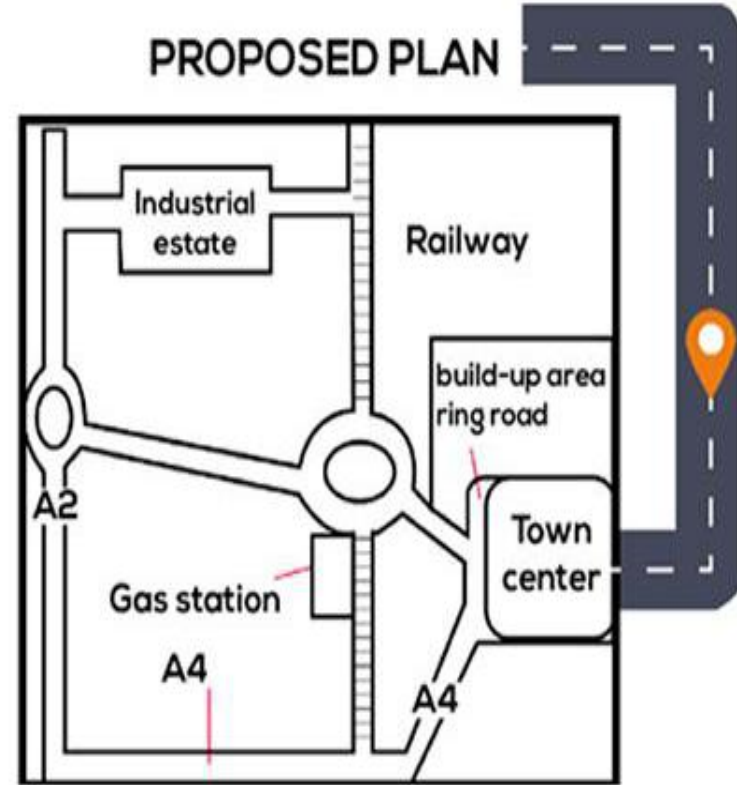

In general, while the area **to the east of** the railway will **remain almost the same**, **the western side** is going to **undergo several significant changes**, especially with regards to the **transport infrastructure**.

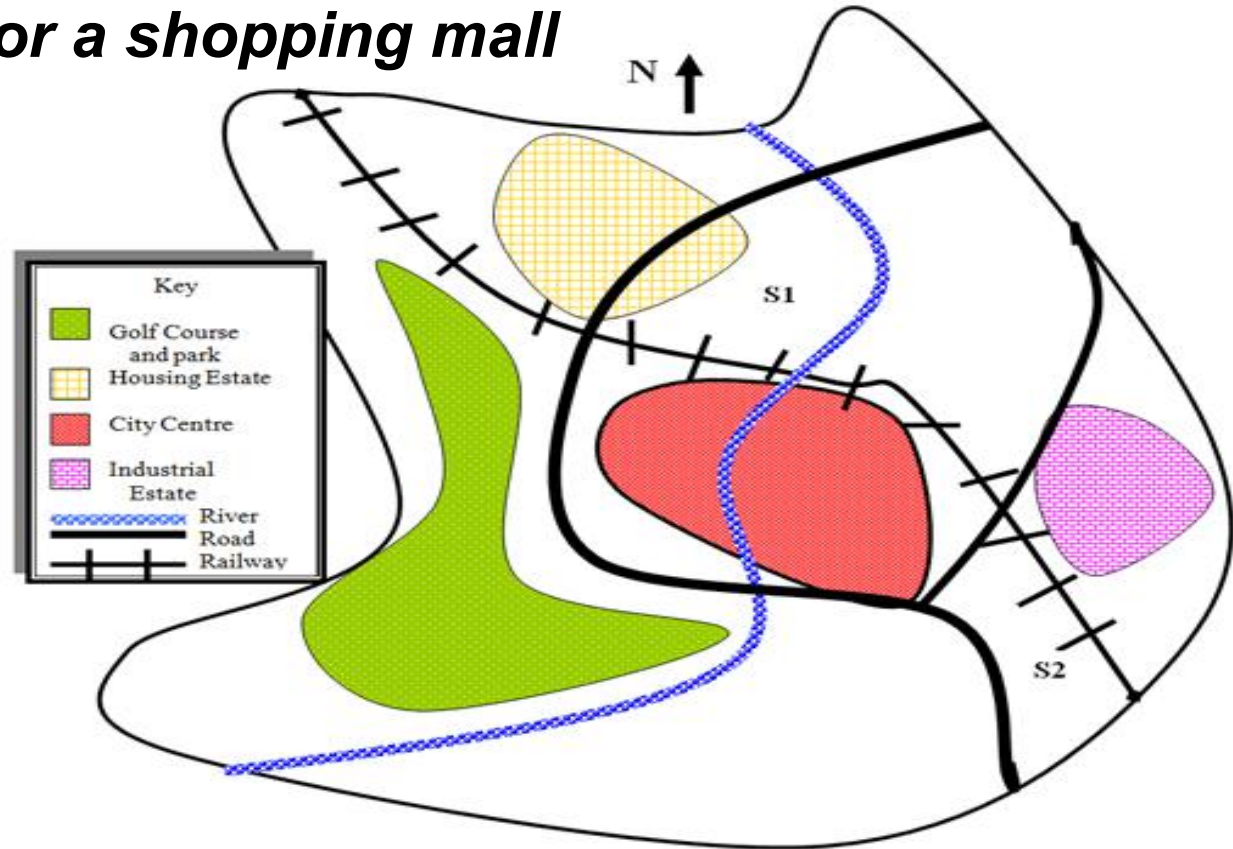

As can be seen in the first map, Hunderstone Town is **currently** divided into two main areas by a railway line, which runs **from north to south** and passes by a gas station. **To the west of** the railway, there is an air field which is connected to the main road (A2). **A roundabout** in the middle of this road connects the A2 road to **the east of the town**, and **in particular**, to the ring road around the town centre.

In the future, the airfield **in the north west** of Hunderstone Town **is expected to be replaced by** an industrial estate. A new railway line will also **be constructed** to provide further access to this area. In addition, a new, larger roundabout will **be constructed midway along the road**, connecting **the east and west** of the town. A new road (A4) which will connect the A4 to the town centre will also **be built in the south of the town**.

Map of Brandfield with two proposed sites for a shopping mall

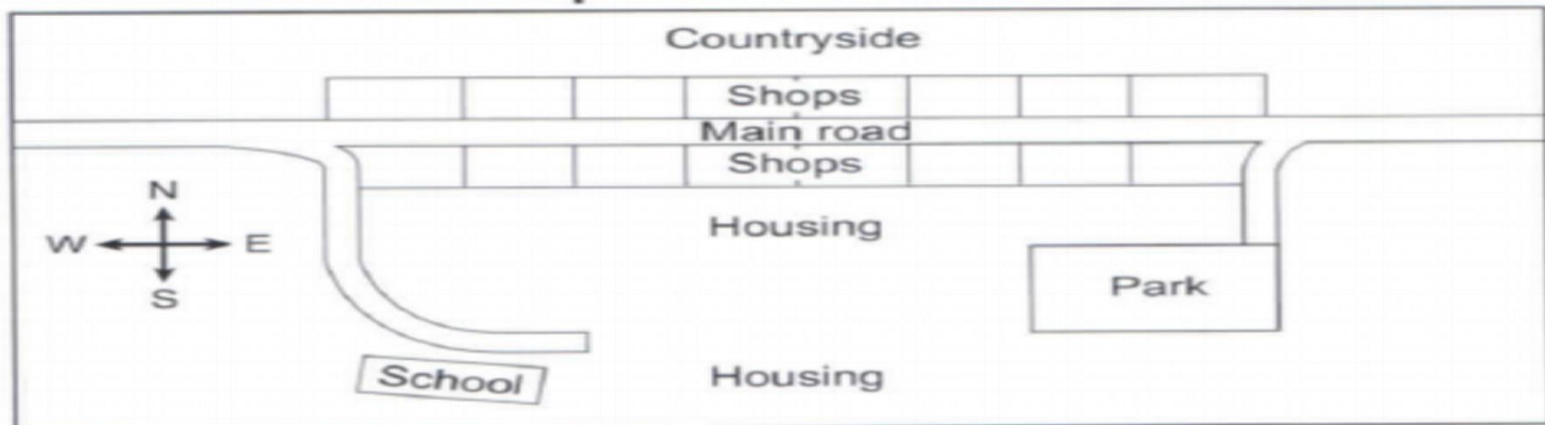

The map illustrates plans for two possible sites for a shopping mall in the city of Brandfield. It can be seen that the two sites under consideration are in the north and the south east of the town.

The first possible site for the shopping mall, S1, is **just north of** the city centre, **above** the railway line, which runs from **the southeast** of the city to **the northwest**. If it is built here, it will be **next to** a large housing estate, **thus providing easy access** for those living on the estate and in the city centre. It will also be **next to** the river, which runs through the town.

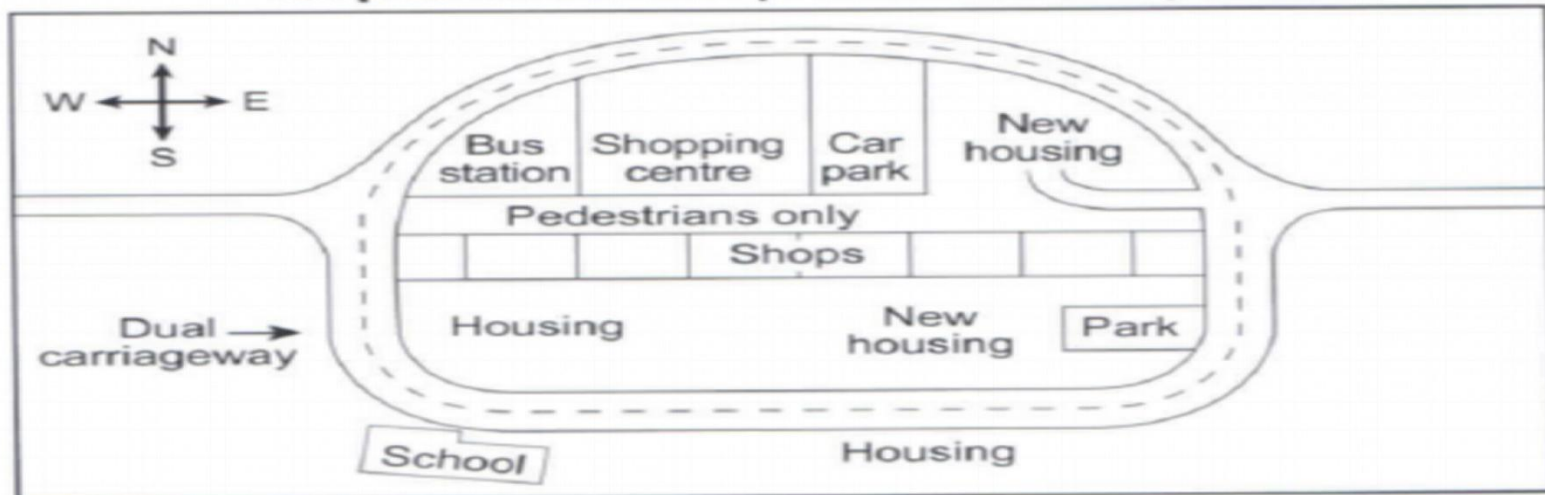

The site in the south east, S2, is **again** just **by** the railway line and fairly **close to** the city centre, but it is **near** an industrial estate **rather than** housing.

There is a main road that runs through the city and is **close to both** sites, **thus providing good road access to either location**. A large golf course and park **in the west** of the town prevents this area from being available as a site.

Exercise 1

Look at the table below which classifies verbs of change. Complete the table using the words in the box. Some words may be used in more than one column.

Make the size bigger	Make the size smaller	Make the number bigger	Make the number smaller	Change or take away	Make better
<i>extend</i>	<i>reduce</i>	<i>increase</i>	<i>reduce</i>	<i>replace (by)</i>	<i>improve</i>

enlarge develop add(to) rise grow decrease
decline drop fall remove convert(into) increase

1. The library has **been expanded** significantly.
2. The science blocks have **merged** into one science zone.
3. The car park has been **renovated** and **converted to** a shuttle bus terminal.
4. The number of footpaths has **increased** while the number of roads has **decreased/ been reduced**
5. The size of the administration building has been **cut down**.
6. A new IT centre has been **added** to the library.

Town centre, 1700

Town centre today

1. The Market Square, which is in the centre of the town, has not changed in 300 years.

Town centre, 1700

Town centre today

2. According to the 1700s map, there **was** a house in the southeastern corner\ in the bottom right-hand corner.

Town centre, 1700

Town centre today

3. Another feature that *has remained* the same is the church, situated in the centre, to the east of/ on the right of the Market Square.

Town centre, 1700

Town centre today

4. The row of shops that can be seen along High Street, has been extended over the years.

Town centre, 1700

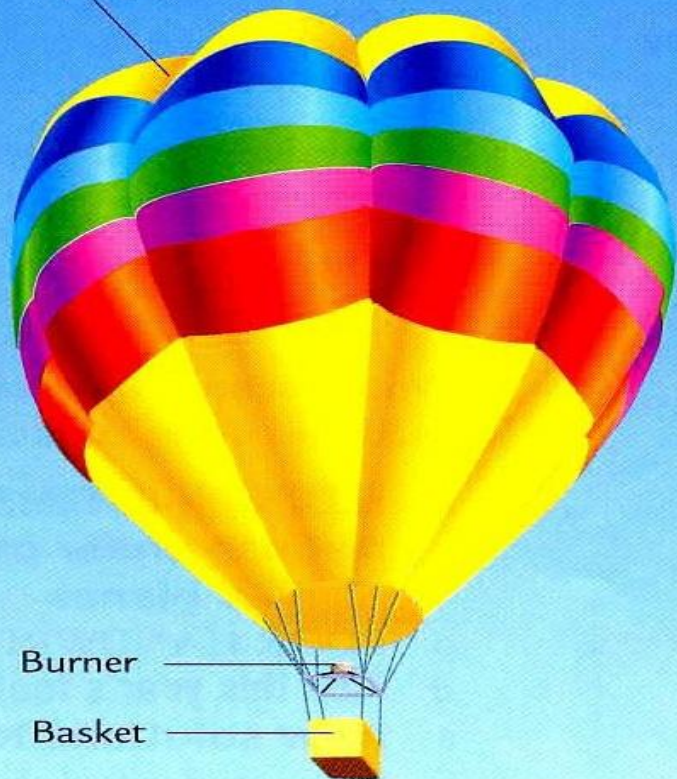

Town centre today

In the 1700s, there were stables located opposite to\ across from\ facing the church.

Envelope (nylon)

Hot air is lighter than cool air

UP

Air heats

Air cools

DOWN

Horizontal movement

How hot-air balloons fly

The pictures show a hot-air balloon and the basic principles that enable it to be flown. The balloon has three main parts: the envelope, which is made of nylon, a burner to produce a flame, and a basket to carry the people.

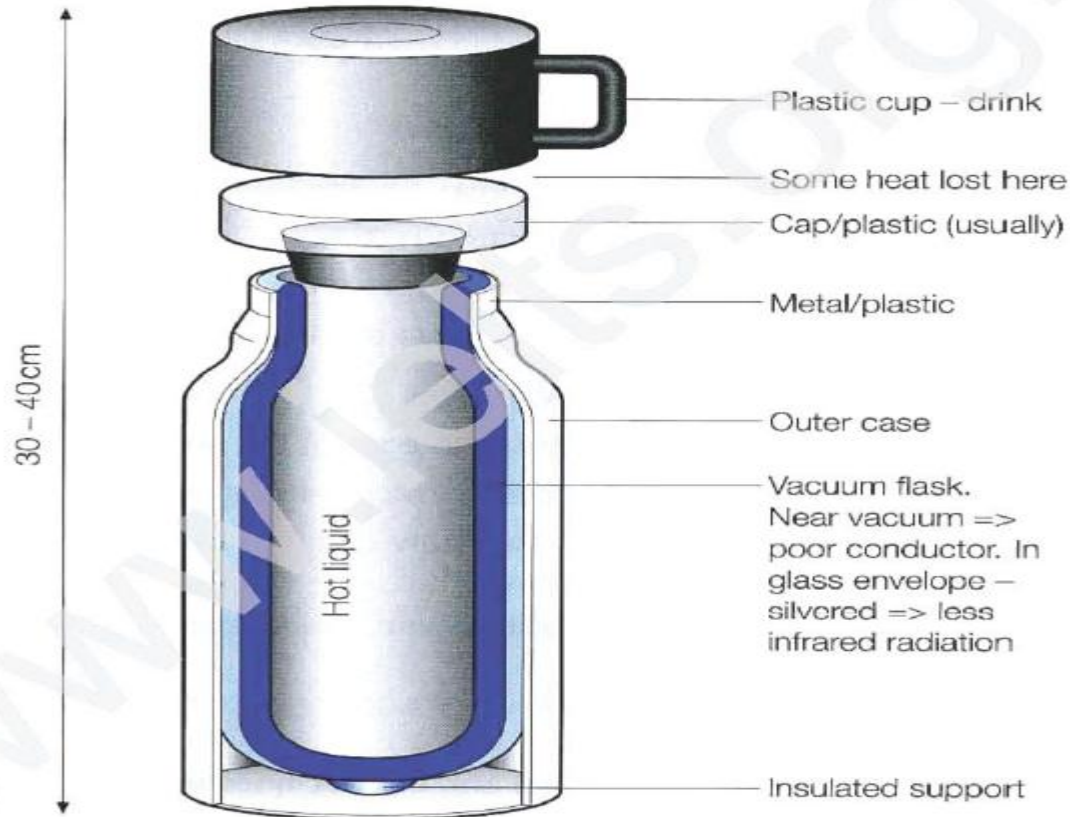

The pilot has to be able to control the upward and downward movement of the balloon so that it can fly. In order to make the balloon go up, the pilot uses the flame from the burner to heat the air inside the envelope. As the hotter air inside is lighter than the air outside, this causes the balloon to rise.

The direction in which the balloon moves horizontally depends on the direction of the wind. Nevertheless, since the wind direction may vary at different heights, moving up or down allows the pilot to steer the balloon.

Changes in Barton Bingham

Thermos flask – maintains temperature – several hours
